- Interface Extension Cable
- Handy Storage Case

VCDS is a software package and interface that turns your PC into a factory level diagnostic system with full support for VW, Audi, Seat and Skoda vehicles from 1990 through the current model year.

VCDS provides access to all diagnostic capable modules with the ability to read and clear fault codes, read/log/graph live data, code modules, perform adaptations, basic settings and actuator tests.

VCDS software updates are available for free via the Internet to keep the tool current.

The VCDS Pro-Kit provides independent shops with the tool needed to use their PC to perform diagnostics at a level comparable to factory equipped dealerships at a price/performance ratio unmatched by any other product on the market.
