

International IC4 Interface Kit

Description:

IC4 USB, or IC4 COM, are the interface kits to connect your laptop/PC to any International Trucks. The kits are compatible with software from International as well as with software from other suppliers.

The IC4 is also used to communicate with International engines in other trucks like the Ford F650 and F750.

Available Software:

International® Master Diagnostics Fleet (**MD Fleet**) is used to diagnose the electronically controlled International® engines.

International® Diamond Logic® Builder (**DLB**) Fleet is used to diagnose the electrical system, including the instrument panel cluster, on The Industry's First High Performance Trucks®.

International® **Hydraulic ABS Fleet** is used to diagnose the Kelsey Hayes, Lucas Varsity, and TRW Ross Hydraulic ABS brake systems.

International® Instrument Panel Cluster Fleet (**IPC Fleet**) is used to diagnose the instrument panel on both Heavy and Medium duty, post 1991, Instrument panel clusters. It is not used on The Industry's First High Performance Trucks®. They are diagnosed with the International® Diamond Logic® Builder (DLB) Fleet software.

These software packages may be run on most Pentium PC's running the Windows 95, 98, 2000 or XP operating systems as long as the appropriate IC4 interface.

Options:

Navistar Service Information is available in electronic format on the **iService DVD**. It includes:

- Service Manual
- Technical Service Information (TSI)
- Circuit diagrams
- Other technical information for all Navistar truck and bus
