

Ford VCM II

The VCM II is the brand new diagnostic interface from Ford® for use with the Integrated Diagnostics Software (IDS). The VCM II and IDS, along with a laptop, provide full dealer-level diagnostic capabilities for most 16-pin Fords. A fantastic new function of the VCM 2 is its ability to communicate wirelessly with your laptop or computer without any hardware or software upgrades. This allows technicians to work on vehicles remotely while the VCM II is connected directly to the vehicle.

The VCM II is recommended for new Ford®, Lincoln®, and Mercury® vehicles. It is also backwards compatible with all 16-pin Ford®, Lincoln®, and Mercury® vehicles. In addition, the VCM II is designed to be compatible with future communication protocols. It supports the Vehicle Measurement Module (VMM) and new Customer Flight Recorder (CFR). The VCM II has shock resistant rubber ends, making it suitable for garage and workshop environments.
