Fiat wiTECH System

The wiTECH™ diagnostic system is designed to work on Chrysler®, Jeep®, Dodge®, Fiat®, and Alfa Romeo® vehicles. It provides the latest wireless technology and significant hardware and software performance enhancements over the StarSCAN™ and StarMOBILE™ diagnostic tools. This cutting-edge technology will enable technicians to increase their productivity and provide world-class diagnostic services to their customers.

The wiTECH VCI Pod works using the wiTECH Diagnostic Application. This software is capable of several diagnostic and maintenance functions including: streaming live data; generating diagnostic reports; customizing data displays; updating ECUs; and accessory upgrades. These features provide technicians with full dealer-level functionality.

The wiTECH™ Access Gateway is a diagnostic tool network that provides secure, reliable wireless communications capability and firewall protection, taking the burden of tool network setup out of the hands of the technician. Multiple wiTECH™ VCI Pods and StarMOBILE™ devices can be supported by a single wiTECH™ Access Gateway.
