

## Ford VCM

The Ford® VCM is a high performance, rugged, vehicle serial communications gateway. This device provides multiple vehicle serial communication interfaces to meet the requirements of all Ford® Motor Company vehicles. The VCM unit is housed in a magnesium enclosure with a tough, protective, plastic cover for the PCMCIA expansion slot which can be used for wireless LAN cards or memory expansion.

The VCM is compatible with the OEM diagnostic software for Ford®, Mazda®, Jaguar®, and Land Rover®. The VCM, when used with the proper software, provides technicians with dealer-level diagnostics and reprogramming.

The optional Vehicle Measurement Module (VMM) aids technicians with diagnostics. It can perform several functions including: ignition system test; fuel pressure test; fuel leak-down test; injector flow test; secondary ignition; current probe functionality; oscilloscope; and digital multimeter.

*Kit shown with optional Vehicle Measurement Module (VMM).*
