

Chrysler StarMOBILE™ Diagnostic System

Description:

The StarMOBILE™ diagnostic system is Chrysler Group diagnostic tool for vehicles equipped with Controller Area Network (CAN) . It extends the functionality of the StarSCAN diagnostic tool by providing the following additional capabilities:

Customer Data Recorder. The StarMOBILE system supplements the Co-Pilot as a customer flight recorder for Controller Area Network vehicles. It has expanded event storage capability and is able to simultaneously record data elements across multiple ECUs, including body modules. During data recording, the StarMOBILE system will record readings selected by the technician when the tool is triggered in the vehicle by the customer.

Pass-Through Diagnostics. In this operation the StarMOBILE system operates in conjunction with a PC to allow scan tool functionality including: data displays, actuators, diagnostic routines, and vehicle flash functions. Unlike the Co-Pilot, which was designed strictly for use in the customer's vehicle, the StarMOBILE system can be put to work throughout the Service Department.

StarMOBILE Kit:

- ◆ StarMOBILE Tester with Boot
- ◆ Power Transformer
- ◆ Vehicle Cable
- ◆ Trigger switch/cable
- ◆ USB cable
- ◆ Crossover Cable
- ◆ Carrying case

Software Features:

wiTECH™ Diagnostic Application This all-new diagnostic application replaces the existing StarMOBILE Desktop Client Application and contains significant enhancements to improve technician efficiency.

It's more intuitive, faster, and provides vehicle data and service information at the same time. It connects to both StarMOBILE devices and the new wiTECH™ VCI Pod.

Available Options:

- Internet subscription for software licensing and updates
- Internet subscription for flash reprogramming
- New/Used Dell Laptop
- New/Used Panasonic Toughbook Laptop
- Software setup
